SPECIAL INSTRUCTIONS   Team Apollo

Instructions in case the deployed application on drone is not working properly

1. CLONE THE GITHUB PROJECT

Project files can be found in the repository at https://github.gatech.edu/gt-cs6440-hit-spring2020/MedicationVisualizer-2.git

2. INSTALL DEPENDENCIES

This web application is a React app built using yarn. It is recommended to install and use yarn for the best experience.

   i.   In the home directory run the following command: `yarn`

      1. *On the chance that you need to install dependencies manually you can use npm or yarn for installation.*

3. RUN THE APPLICATION LOCALLY

   i.   In the home directory run the command: `yarn start`

   ii.   Visit the following address to reach the landing page:
         http://localhost:3000/medviz2-frontend

   iii. See the Application Manual to see more details about the application
